# "Fiber To The Future"

## NSR/BCG Global Infrastructure Conference

Join us to hear from the companies around the world who are at the forefront of deploying broadband infrastructure. Key topics include:

Where is fiber deployed today; where is it going?

Are there enough deployment resources available for all companies to meet their targets?

Is market pricing at risk from increased competition?

Will supply chain constraints slow deployment or drive up costs?

Is there a realistic path to lower costs and capex following fiber upgrade?

Cable's path to 10G via DOCSIS

The opportunity and threat from fixed wireless broadband

Subsidies and the closing of the broadband divide

The threat of wholesale access and price regulation

Can broadband providers compete longer-term without a wireless offering?

Will Cable need to deploy FTTH to remain competitive (as MSOs are doing in Europe)?
